The ASISTIM Academy has established training programs which on one side allow airlines to fulfill the IOSA training requirements by adhering to the training syllabus given in ICAO doc. 7192-AN/857 Part D-3, which is the basement of our brief but challenging training Program and on the other side provides intensive and interactive short lessons to improve the airlines daily operational work in different departments.

Trainees who have completed a training course with the ASISTIM Academy are issued with a certificate that confirms the recipient has successfully completed the attended courses. The certificate also displays the training content and the total classroom hours allocated to each subject.

On-Site-Training
